EIA ENGINEERING BULLETIN

Correct Orientation of Tantalum and MLC Capacitors in EIA-481

A Statement issued by members of EIA/ECA Steering Committee S-1

EIA/ECA-CB20

November 2005

ELECTRONIC COMPONENTS, ASSEMBLIES & MATERIALS ASSOCIATION
THE ELECTRONIC COMPONENTS SECTOR OF THE ELECTRONIC INDUSTRIES ALLIANCE

NOTICE

EIA Engineering Standards and Publications are designed to serve the public interest through eliminating misunderstandings between manufacturers and purchasers, facilitating interchangeability and improvement of products, and assisting the purchaser in selecting and obtaining with minimum delay the proper product for his particular need. Existence of such Standards and Publications shall not in any respect preclude any member or nonmember of EIA from manufacturing or selling products not conforming to such Standards and Publications, nor shall the existence of such Standards and Publications preclude their voluntary use by those other than EIA members, whether the standard is to be used either domestically or internationally.

Standards and Publications are adopted by EIA in accordance with the American National Standards Institute (ANSI) patent policy. By such action, EIA does not assume any liability to any patent owner, nor does it assume any obligation whatever to parties adopting the Standard or Publication.

Technical Bulletins are distinguished from EIA Standards or Interim Standards, in that they contain a compilation of engineering data or information useful to the technical community and represent approaches to good engineering practices that are suggested by the formulating committee.

This Bulletin is not intended to preclude or discourage other approaches that similarly represent good engineering practice, or that may be acceptable to, or have been accepted by, appropriate bodies. Parties who wish to bring other approaches to the attention of the formulating committee to be considered for inclusion in future revisions of this Bulletin are encouraged to do so. It is the intention of the formulating committee to revise and update this Bulletin from time to time as may be occasioned by changes in technology, industry practice, or government regulations, or for other appropriate reasons.

(From Project Number 5117, formulated under the cognizance of the ECA S-1 Steering Committee.)

Correct Orientation of Tantalum and MLC Capacitors in EIA-481

A Statement issued by members of EIA/ECA Steering Committee S-1

"The current revision of EIA 481 Rev C has been updated to define tape and reel orientation for a wider range of SMT devices; however this has created a conflict with the original orientation definitions for tantalum chip and multilayer ceramic chip capacitors.

Tantalum chip capacitors will retain "right handed" reeling (parts across the tape with positive termination AWAY from the sprocket hole) as previously defined in tape and reel revision EIA-481-1 and component specifications EIA-535BAAC (Standard) and EIA-535BAAE (Low ESR) series.

MLC capacitors will not adopt the new orientation; for the various case size options please refer to current manufacturer's data sheets for correct orientation.

Both tantalum and MLC capacitor orientation will be updated in the next revision of EIA 481"

EIA Document Improvement Proposal

If in the review or use of this document, a potential change is made evident for safety, health or technical reasons, please fill in the appropriate information below and mail or FAX to:
