

Preliminary Information on Manufacturing, Processing, Distribution, Use, and Disposal:

Phenol, isopropylated, phosphate (3:1)

Where $R^x = H$ or $CH(CH_3)_2$ and all three rings have at least one $-CH(CH_3)_2$ group.

August 2017

Support document
for Docket EPA-HQ-OPPT-2016-0730

This document provides a preliminary public summary of available information collected by EPA's Office of Pollution Prevention and Toxics (OPPT) in the Office of Chemical Safety and Pollution Prevention (OCSPP) on the manufacturing (including importing), processing, distribution in commerce, use, and disposal of this chemical. This is based on existing data available to EPA, including information collected under the Chemical Data Reporting rule, Toxics Release Inventory (if available), information from other Agency databases, other U.S. Government agencies, publicly available information from states, and a review of published literature. In addition, the document includes information reported to EPA by producers and users of the chemical in the United States and in other countries.

This preliminary use information and any additional use information received in the docket by December 9, 2017, will inform efforts to identify, under section 6(h)(1)(B) of the Toxic Substances Control Act (TSCA), whether exposure to phenol, isopropylated, phosphate (3:1) is likely, under the conditions of use, either to the environment, the general population, or to a potentially exposed or susceptible subpopulation identified by EPA. The information will also inform any risk management efforts following the exposure and use assessment under TSCA section 6(h)(1)(B).

The chemical structure for phenol, isopropylated, phosphate (3:1) shown on the cover constitutes a family of structures in which each of the three aryl groups have at least one isopropyl group. Examples of chemicals covered by this document that meet this general structure include:

- Tris(3-isopropylphenyl) phosphate
- Tri(isopropylphenyl) phosphate
- Tri(4-isopropylphenyl) phosphate

Mention of trade names in this document does not constitute endorsement by EPA. To verify products or articles containing this chemical currently in commerce, EPA has identified several examples. Any lists are provided for informational purposes only. EPA and its employees do not endorse any of the products or companies.

This document does not contain confidential business information (CBI).

Docket: EPA-HQ-OPPT-2016-0730

MANUFACTURING, PROCESSING, DISTRIBUTION, USE AND DISPOSAL

1. Manufacturing (Including Importing)

For the 2016 Chemical Data Reporting (CDR) period, 9 sites reported manufacturing (including importing) phenol, isopropylated, phosphate (3:1) in the United States^{1,2}. The total amount (lbs) of phenol, isopropylated, phosphate (3:1) manufactured or imported annually in the United States was 12,362,683 in 2010; 14,932,040 in 2011; 3,191,017 in 2012; 2,968,861 in 2013; 5,632,272 in 2014; and 5,951,318 in 2015.

Phenol, isopropylated, phosphate (3:1) is not reported to the Toxics Release Inventory.

Manufacturing Process

Phenol, isopropylated, phosphate (3:1) is made by reaction of phenol with propylene. The resulting product is a mixture of mainly ortho- and para-isomers with varying degrees of alkylation. The product of this reaction is then mixed with phenol and reacted with phosphorus oxychloride to produce the phosphate ester. The relative amounts of phenol and isopropylated phenol can be varied to give a range of products with a corresponding range of properties.

Source: <https://pubchem.ncbi.nlm.nih.gov/compound/75628#section=Methods-of-Manufacturing>

Triaryl phosphates isopropylated are manufactured from phosphorous oxychloride and phenol. The manufacturing process is carried out in closed reactors and the hydrogen chloride gas generated during the reaction absorbed in water.

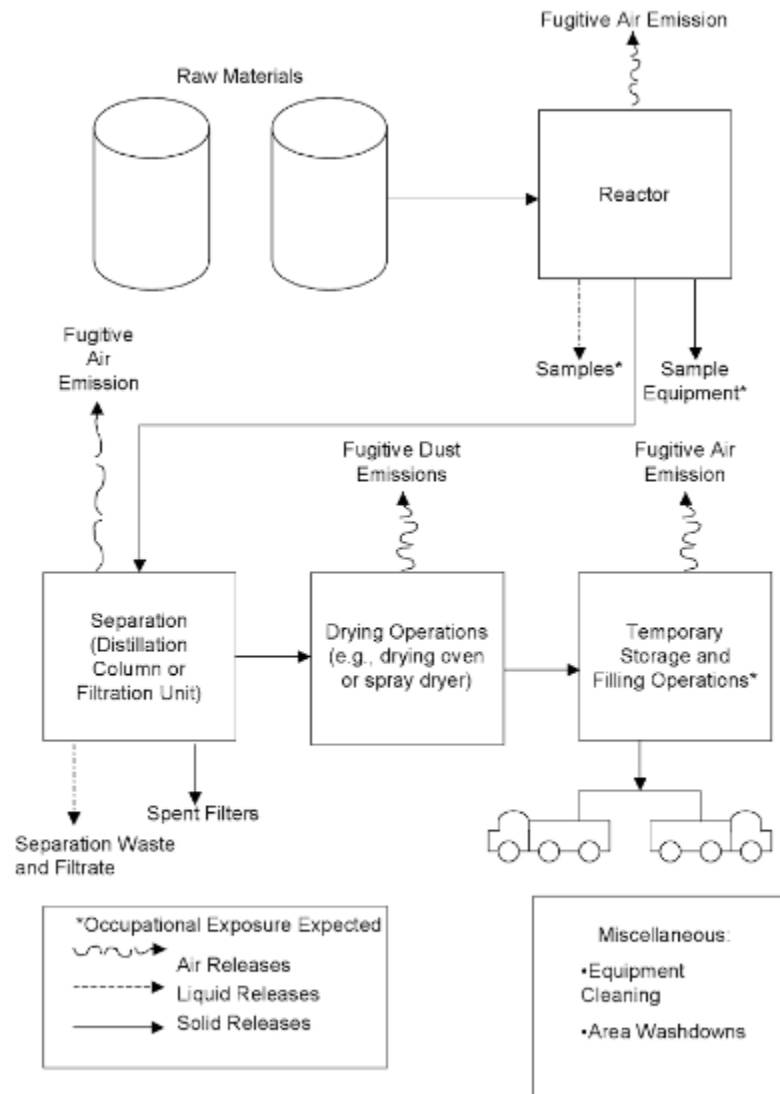

Source: <https://toxnet.nlm.nih.gov/cgi-bin/sis/search2/f?./temp/~M6hbNs:1>

The figure below provides a generic depiction of a process for manufacturing phenol, isopropylated, phosphate (3:1).

Source: https://www.epa.gov/sites/production/files/2015-04/documents/ffr_foam_alternatives_vol1.pdf

¹ Manufacturers (including importers) are required to report under CDR if they meet certain production volume thresholds, generally 25,000 lb or more of a chemical substance at any single site. Reporting is triggered if the annual reporting threshold is met during any of the calendar years since the last principal reporting year. In general, the reporting threshold remains 25,000 lb per site. However, a reduced reporting threshold (2,500 lbs) now applies to chemical substances subject to certain TSCA actions. <https://www.epa.gov/chemical-data-reporting/how-report-under-chemical-data-reporting>

² Manufacture in the context of CDR means to manufacture, produce, or import for commercial purposes. Manufacture includes the extraction, for commercial purposes, of a component chemical substance from a previously existing chemical substance or complex combination of chemical substances. (40 CFR 711.3) https://www.epa.gov/sites/production/files/2015-12/documents/cdr_fact_sheet_importers_final_dec2015_0.pdf

Generic Chemical Manufacturing Process Flow Diagram

2. Processing

Based on publicly available information reported to the 2016 CDR, processing of phenol, isopropylated, phosphate (3:1) includes:

Table 1. NAICS codes of industries processing phenol, isopropylated, phosphate (3:1).

NAICS	NAICS Title
42, 44, 45, 48, 49	Wholesale and Retail Trade
336	Transportation Equipment Manufacturing
3261	Plastics Product Manufacturing
32551	Paint and Coating Manufacturing
32552	Adhesive Manufacturing
324191	Petroleum Lubricating Oil and Grease Manufacturing
325211	Plastic Material and Resin Manufacturing
325212	Synthetic Rubber Manufacturing
325992	Photographic Film Paper, Plate, and Chemical Manufacturing

As reported to the 2016 CDR, the types of processes using phenol, isopropylated, phosphate (3:1) include incorporation into articles, use as a chemical processing or manufacturing aid, and incorporation into a formulation, mixture or reaction product.

Phenol, isopropylated, phosphate (3:1) is widely used for both its flame retardant and lubricating properties.

A number of applications to which flame retardants such as phenol, isopropylated, phosphate (3:1) are added include the use in textiles, rubber, polyurethane foam, antistatic agent, cellulose, cotton, cutting oils, electronic equipment such as video display units cables, casting resins, glues, engineering thermoplastics, epoxy resins, and phenolic resins.

Source: **van der Veen, I.; de Boer, J. Phosphorus Flame Retardants: Properties, Production, Environmental Occurrence, Toxicity and Analysis. Chemosphere 2012, 88 (10), 1119–1153.**

Because phenol, isopropylated, phosphate (3:1) is a liquid, processing into lubricant products and liquid flame retardants involves adding it into formulated mixtures. Data was not available to the EPA regarding the equipment commonly used for this process.

3. Products and Articles

EPA identified the following types of products [and articles] based on a search of available sources for products containing phenol, isopropylated, phosphate (3:1). This list is provided for informational purposes only. EPA and its employees do not endorse any of the products or companies. Due to lack of available data on which articles contain specific flame retardants, only products have been included in this section.

4. Distribution (Includes Retailers)

Based on data reported to the 2016 CDR, eight sites manufacture or import phenol, isopropylated, phosphate (3:1) for wholesale and retail trade in 2015. Phenol, isopropylated, phosphate (3:1) is available for purchase online from chemical suppliers.

5. Use

In addition to the applications and products described above, **flame retardants**—some of which contain phenol, isopropylated, phosphate (3:1)—are used predominantly in four major areas: **electronics and electrical devices**, building and construction materials, furnishings, and transportation. They are also used in adhesives, lubricants, oils, paints, epoxy resins, and **plasticizers**.

Commonly treated electronics are TVs, computers/computer accessories, phones, washers and dryers, circuit boards, electrical cables, and other various household appliances. For building and construction materials, treated products include insulation materials, paints and coatings, wood products, roofing components, composite panels, and fixtures. Home/Office furnishing such as foam upholstery, curtains, carpets, and any fabrics that house them may also contain phenol, isopropylated, phosphate (3:1). Fabrics, foams, carpets, electrical equipment, and bumpers in airplanes, trains, and automobiles also contain flame retardants.

6. Disposal of Waste and Recycling/Recovery

Data was not available to the EPA regarding the disposal or recycling of phenol, isopropylated, phosphate (3:1).

USEFUL TYPES OF INFORMATION

This document presents a summary of information currently available to EPA on phenol, isopropylated, phosphate (3:1). EPA is interested in obtaining information to more fully characterize the manufacturing, processing, distribution, disposal, and use of chemicals that fall within the structure described earlier, to inform the development of the exposure and use of these chemicals, and to inform any subsequent risk management efforts. For example, EPA is interested in obtaining information on:

- the functional uses for this chemical;
- what types of products contain this chemical;
- which industry sectors use this chemical;
- what volume of the chemical is used;
- which uses have been discontinued or phased out;
- exposure scenarios for this chemical; and
- articles in which this chemical is found.
