

Training and learning you can trust in a data enabled world

The Trust Bridge™ in partnership with the innovative e-learning company, e-Careers has launched a number of specialist Data Privacy and Information Management courses.

The courses have been written by our experienced team including Chief Technology Officer, David Clarke with input from our EU Counsel, Carol Tullo, and COO, Penny Heyes.

With the combined experience of the authors working across the public sector and major multinationals, and more recently with clients, we have designed these courses to be practical and to support specific functions and processes.

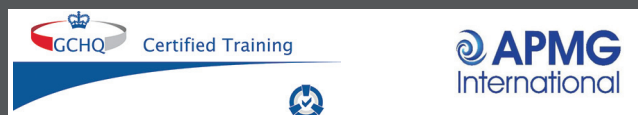

The Trust Bridge has identified the issues facing organisations in the early assessment and the implementation phases of the new Data Privacy Regulations.

In the run up to the adoption of many of the GDPR Principles across the globe including Europe, North America and Asia, these courses are ideal for all staff to undertake in order to familiarise themselves with the key issues.

Our online courses are accredited by the global independent certification body, Cepas Bureau Veritas

CEPAS is the Personnel and Training Courses certification arm of Bureau Veritas, the recognised world leader in testing, inspection and certification services. CEPAS is a full member of IPC (International Personnel Certification Association), the only international association of the most important Auditor and Training certification bodies.

The Trust Bridge Breach course "Data Breaches and how to Manage them" is an APMG International GCHQ Certified Training Course. APMG has been appointed as the independent Certification Body for GCHQ, The UK government's intelligence, cyber and security agency.
